Belgrade*

Dear Sir or Madam,

As a student of Electrical Engineering at University of Belgrade, I've heard about an internship from my friends. I attend first year, so I was expecting an application deadline in late spring, and that is why my application is a bit late.

Most of my time at highschool I've enjoyed working on projects and building interesting things. I attended Applied Physics and Electronics seminar at Petnica Science Center for four years, where I expanded my knowledge in fields like Electrical Engineering, Computer Vision, Machine Learning, Signal Processing and many more.

I was a Specialized Mathematics (SM) student at my highschool, where I covered subjects like Math, Computer Science and Physics with much more depth than standard classes. My Computer Science professor Zoran Vasiljević (Guki) has had a great influence on my programming skill which helped me look at the world in a different way.

I also enjoy having fun and hanging out with geeky friends playing board games such as Warhammer and Dungeons & Dragons. I've spent a lot of time playing American Football, where I've met a lot of different people, and gained a better view of people living in my town.

Through the years I have acquired many skills that let me work on interesting things such as building a robot for the Eurobot competition. Projects like those, where I've worked with people gave me a good perspective on teamwork, that I use not only for projects, but for my personal life, too.

I believe that Microsoft Development Center Serbia is one of few places where I can further expand my knowledge and that my current knowledge and experience is suitable for a position such as an intern.

Apologies for the delay.

Yours faithfully,

Dorđe Marjanović
